**'YES'**

## WE HAVE A LIMITED VOCABULARY

WR Systems' mission statement is simple – **'YES.'**

**Yes**, we can build it.

**Yes**, it can be repaired.

**Yes**, there are a few more years left in it.

**Yes**, we will be there.

**Yes**, you can count on WR Systems.

## **WR Systems, Ltd. is a global provider of mission-critical technical solutions to the maritime, healthcare, and government sectors.**

Through the company's three core operations – Maritime Technologies, Healthcare Technologies, and Government Business Solutions – WR Systems has, since 1983, supported some of the world's most well known and demanding customers by providing mission-critical technical solutions.

Off-shore energy companies and children's hospitals. Cruise lines and departments of state. The world's largest shipyards and 17 navies. Just a sampling of the repeat customers who choose WR Systems for the company's renowned customer support, deep technical expertise and dedication to developing, deploying and maintaining systems cost effectively, anywhere in the world.

---

**WR Systems Government Business Solutions** is a valued contractor to the Federal Government, and is well positioned to support strategically planned growth. We are also a valued principal subcontractor to large-scale integrators in the defense industry.

Our end-to-end technology solutions and professional support services for state and local governments add value to front-line operations and strengthen bottom-line results.

---

**WR Systems Healthcare Technologies** provides world-class troubleshooting and repair of both electrical and mechanical medical equipment components. This often occurs without having the required supporting documentation, such as manuals and schematics, wherein the expertise of our subject matter experts is called into play to determine the issue and develop the appropriate solution.

The unique ability of our subject matter experts to troubleshoot and repair at the component level has resulted in vast cost savings to the medical world, thus reducing medical costs to the consumer. This increases the life cycle of the equipment and saves the hospital costs of replacing the item.

---

**WR Systems Maritime Technologies**, drawing on world-class expertise and decades of global experience, provides integrated and engineered systems solutions to defense and commercial vessels. From designing, building and installing sophisticated bridge systems for new builds and retrofits, and continuing through a ship's life cycle, WR Systems is your best, one source solution. And when your vessel needs repair, WR System's global support network stands ready to minimize your ship's downtime with the best service available on land or sea.
